Tasks

A task consists of the combination of implement type and the selected field. The Precision-IQ application stores field activities related to each task. By using tasks, you do not have to continually configure frequently used field profiles.

When you enter a field with the same operation and implement that you used previously, the application continues the previous task unless the Max Task Time has already passed.

When you change operation, implement, or field, the application automatically starts a new task.

Use [Field Manager Task History](#) to:

- Open a previous task.
This is helpful if you enter a field and do not see coverage that you want to see from an earlier activity. This shows the coverage from the previous task in the field, and adds the new activity to the previous task.
- Start a new task.
This is helpful if you enter a field and you see coverage from an earlier activity that you do not want to see for the current activity. When you start a new task, the application removes the previous coverage from the Run screen and saves the current activity in a new task.
- Review the task history.
Tap a specific task to select it. Each task is shown with its start and end date and time. The map shows the coverage layer(s) saved for the selected task.

Data Stored in Each Task

The data stored in each task includes:

- The field you are working in.
- Date and time for starting and stopping task.
- Coverage list: The list of task coverages for the field.
- Coverage overlap: The area of coverage overlap.
- Height: Mean height above sea level.
- Speed: The speed of the vehicle.
- Material: The material being applied, if applicable.
- Guidance engaged: When the automatic guidance system was and was not engaged.
- Applied rate: The rate material is applied.
- GPS Quality: The quality of GPS.

Create a Task

To create a valid task, you must select an implement and, if applicable, an appropriate material. On the Home screen, the task tile will update to show the associated task:

Tap this tile to modify the name and date of the task. If the implement and material selected are not appropriate or if no task is selected, the Task tile will show a red status:

You cannot enter the Run screen without selecting a task.
