TRIMBLE RESELLER CONFIDENTIAL

Application Control Installer Menus

From the Precision-IQ Home screen, tap the **Settings** button. Then on the Settings screen, tap **Application Control**. Tap the **ON/OFF** switch to enable or disable the Application Control options as described below.

Menu Item	Description
Enable Access to Installer Menu	Once the implement is initially created and saved, re-entering the edit workflow will show the simplified version of the workflow that will only display settings that are commonly adjusted. In order to gain access to the “installer” workflow again, you must enable access via a user preference under the Application Control category.
Auto Select Implement	Automatically selects implement after they are created.
Adjust Rate Themes for Material	Automatically adjusts the rate coverage theme for the material assigned to the channel.
Adjust Applied Rate Theme for Prescription	Automatically adjusts the applier rate coverage theme for the prescription assigned to the channel.
Enable Prescription Usage Automatically	Enable usage of the prescription when its assigned to the channel. If disabled, the “Rx” target rate icon must be selected before the channel will apply to the prescribed amount.
Enable Auto Manual Boundary Increment	When enabled, this sets the Left/Right arrow buttons to snap to the next section. This is useful when sections widths are variable widths. If off, then the system will snap to the user-defined width.
Manual Boundary Increment	Defines the “snap to” distance for the boundary increment. This setting is only available when auto boundary increment is set to off .
Turn off all sections on Zero Target Rate	When enabled, section valves will turn off if the channel target rate is set to 0 .
Rate Snapping level	Sets the threshold for the as-applied rate to lock to snap to the target rate. The higher the value, the more tolerant the as-applied rate will be to flow fluctuations.
